

Figure 7. Same as Figure 4, except for EPIC 220274129. Mode-by-mode frequency adoption and prewhitening progresses in the sequence of smaller panels from left to right, then top to bottom. The vertical dashed lines and diamonds indicate candidate frequencies and amplitudes underlying the *K2* signals, color-coded to match the triangles in Figure 6. Signals marked with black triangles were informed by *K2* data, while unfilled triangles mark signals selected solely from the ground-based observations. The last panel highlights residual power in the fully prewhitened light curve.
